

## Oncology: Cancer care through the circle of life

**Period:** 8 July – 19 July 2019

**Course fee:** € 600,--

**Level:** bachelor

**Credits:** 3 ECTS

**Course director:** Marieke Schreuder-Cats

### Target group:

This course is intended for nursing, medical, physiotherapy, social work and allied health care workers who want to learn about cancer care and work in an international context.

### Content:

This two week course will provide a comprehensive overview about cancer care through the circle of life. Cancer can develop at any age and is a disease of all times. Cancer is a worldwide problem and makes no distinction in age or country. What care is needed for these different age groups and for the different tumors?

Topics discussed in this course represent: what is cancer and how is it treated, how is care for patients with cancer organized and what are strategies to improve cancer care.

In this course you work in multidisciplinary groups (e.g. nursing, medicine, physiotherapy, social work). You learn how to participate in a multidisciplinary team. You learn about the importance of the different perspectives and roles. The ICF-system (International Classification of Functioning, disability and health) will be used as our common language.

The course includes various site visits.

### Aim:

To provide students with the latest knowledge and skills in the area of cancer care.

### Study load:

Two weeks of lectures, workshops and visits (in total 60 hours), self-study (20 hours). Prior to summer school, students will have an assignment and an assessment will follow at the end (10 hours).
